

WASH & CARE INSTRUCTIONS FOR INTEGRATED PANTS & JERSEYS

COLD WATER WASH. Wash them separately from other garments.

Keep whites and colors apart.

Do not allow perspiration soaked or muddy garments to lie in a pile or rest on top of each other for any period of time. Launder them immediately if they really, really need it. However, it is not necessary to launder after every wearing. Simply hang them on a plastic or wooden hanger until the next day of practice.

WASH jerseys **INSIDE OUT** with a Mild Detergent using in **COLD WATER** on **GENTLE CYCLE** and then **HANG DRY** (wooden or plastic hanger).

Use **MILD** powdered detergent. Detergents with pH under 10 are recommended for athletic uniforms. Powdered detergents are recommended for athletic colors.

DO NOT use chlorine bleach. **DO NOT** use fabric softeners. **DO NOT** soak the pants or jerseys. Softeners deteriorate garments with spandex. They also restrict the effectiveness of Dri-Fit technology and act as a magnet to dirt.

DO NOT OVER-WASH pants. If you are having difficulty getting the white pants clean, spray them with pre wash spray and wash them using Oxyclean.

REMOVE garments from the machine immediately after washing. This will help avoid color bleeding, particularly on color blocked garments.

Allow the pants and game jersey to **AIR DRY**. **DO NOT PUT THE PANTS and JERSEYS IN THE DRYER**. It ruins the belts, melts the pads and fabric. Screen-printing will melt and the rib trims will lose their stretch. If you must dry them, do so on the **LOWEST** setting. Line Drying is recommended, particularly with these garments.

DO NOT DRY CLEAN OR PRESS garments. This will discolor the fabric. Screen-printing will melt and the rib trims will lose their stretch.

ONCE again, **COLD WASH** and **AIR DRYING** are the best way to launder these items so that they stay looking new!
