

Edel ID.

Characteristics

Unique knit-d-knit technology

- Excellent ball speed;
- More than 1.500.000 filaments improves ball roll predictability
- Less skin friction and better stick surface interaction

Extreme durable

- Special shaped massive 205 micron fibre;
- Higher wear and tear, longer lasting
- Good reflection reduction

Controlled water consumption

- Low or no H2O
- The pitch can be played on in wet and dry conditions with the same durability
- In dry conditions the system still meets the FIH Global standards

Designed for 3D Hockey

- Special engineered backing

The best alternative to nature!

Edel ID.

Edel ID.

The road to perfection!

Improve, innovate and create the best; that was the starting point for the development of Edel ID! Since hockey is known as one of the world's most innovative sports, the field of play must be absolute top class! With that goal in mind and by adding the latest market feedback to acquired experience, Edel Grass succeeded in combining traditional "nylon" – like ball roll speed and precision with nowadays demands on 3D play, consistency and sustainability, creating the best hockey floor system ever! Using a highly advanced "knit-d-knit" technique to create micro-curved yarns for unrivalled, long lasting ball roll predictability and reduced stick slide resistance, while applying over 1,5 million monofilaments per m², Edel ID. is the absolute summit of FIH Global (water based) systems in the world!

Applications

- Professional level Hockey (stadium)
